James ,
A point of clarification on Specific Comment 4 regarding the Building
513 Chlordane Soil Contamination: The initial investigation showed a
24,000 ug/kg chlordane concentration in soil. A repeat sampling found
approx 3,000 ug/kg in the area, but did not find the higher concentration. At a subsequent BCT it was agreed that further investigation of this small area was not warranted; since the location

was just outside the building where equipment washout activities could have occurred I think the 24,000 number could be real, but the Air Force says the 24,000 number was not confirmed. The area is small and the BCT agreed that remediation was not necessary. In SC 19 we do ask that the AF recognize the value above the residential PRG of 1,600 ug/kg. Because the Building is scheduled for demolition, the hassle of defining an IC may not be worthwhile for this FFS and the followup ROD. Let us know if you want these comments revised.

Happy New Year James,
Attached you will find our review of the FFS for OU 4. Please feel free to call Bill or me if you have any questions or would like to discuss it

further.

Thanks, Mary

Subject: George OU4 FS

Mary/Bill,

Please conduct a detailed review of subject FS and give me your inputs

by Dec 26. Since all required removals have been done, and some sites

require ICs, focus your review for following areas:

- The discussion of remedies and determine if they adequately support

the remedial action objectives.

- If FS supports the CERCLA process.

- If FS is adequate documentation for the ROD.

Let me know a week in advance of Dec 26 you're going to have problems

meeting that due date. Thanks.

(See attached file: Draft OU 4 FFS.pdf)
